

Overview Document

Shown below is the file structure for our GitHub repository. It indicates all the main project files and folders:

- ➔ '/spotifyApp/spotifyApp/' is our main project folder.
- ➔ At the moment, we have three Django “apps” to set up our website – frontCode, frontEndReact, and spotifyAPI. More information on Django settings is mentioned in '/spotifyApp/spotifyApp/settings.py'.
- ➔ '/spotifyApp/frontCode/' has all the backend code for setting up the pages of the website.
- ➔ '/spotifyApp/frontEndReact/' has all the React frontend code for the pages of the website.
- ➔ '/spotifyApp/spotifyAPI/' has all the code to set up interactions with the spotifyAPI.
- ➔ The 'models.py' files store all the database models.
- ➔ The 'views.py' files hold the code responsible for rendering the API endpoints.
- ➔ The 'urls.py' files are the URLs local to each app.
- ➔ '/spotifyApp/frontCode/serializers.py' translates a model into a json response.
- ➔ '/spotifyApp/spotifyAPI/client_secrets.py' is where the Spotify client credentials are stored.
- ➔ '/spotifyApp/frontEndReact/src/' is where all our main React source files for the website are stored.
