

Project Documentation/Instruction Document: Spotify Groups

- Homepage: Page 2
- Spotify log in: Page 3
- Create room: Page 4
- Join room: Page 5
- Room: Page 7
- Playing a song: Page 11

Home page:

When you click into the website, you will see the Home page.

There are two options here: Create Room and Join Room.

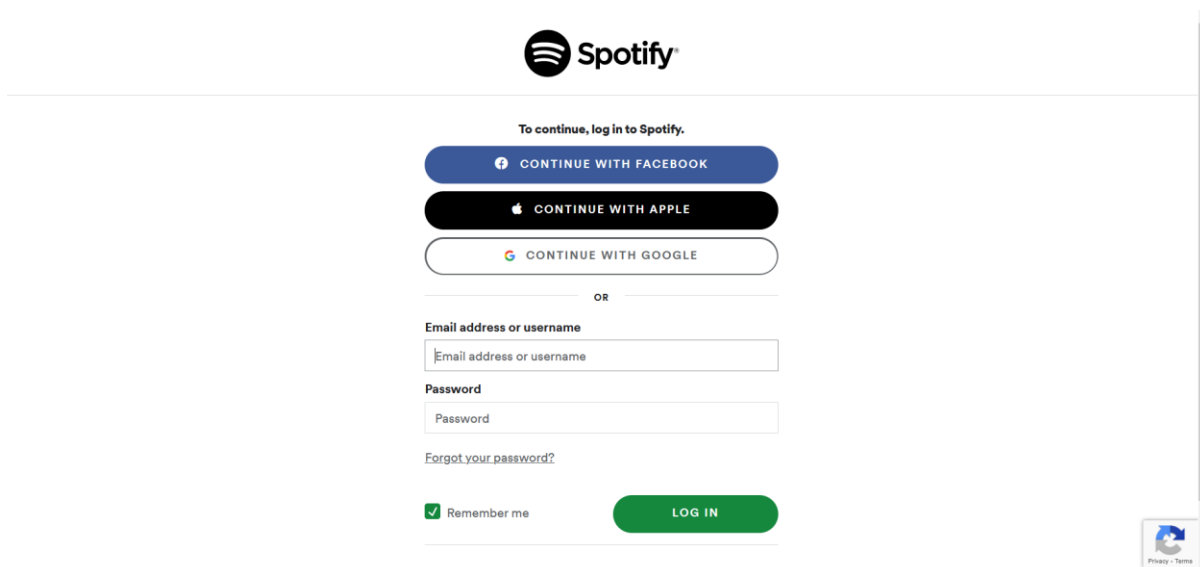

The Home page

Click Create Room, and you will be asked to log in with your Spotify account.

Click Join Room, and you will be redirected to the Join Room lobby.

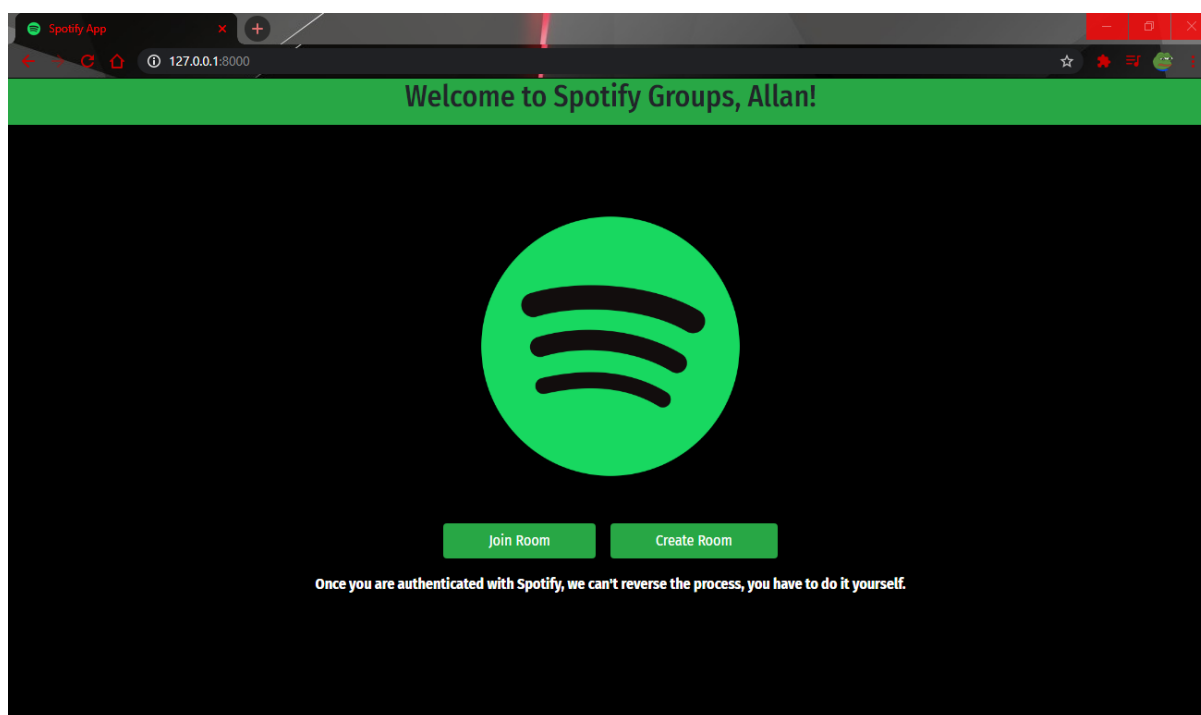

When you hover over either of these buttons, they will grow larger.

Spotify log in:

Spotify's login page

You need Spotify Premium in order to host a Spotify Group.

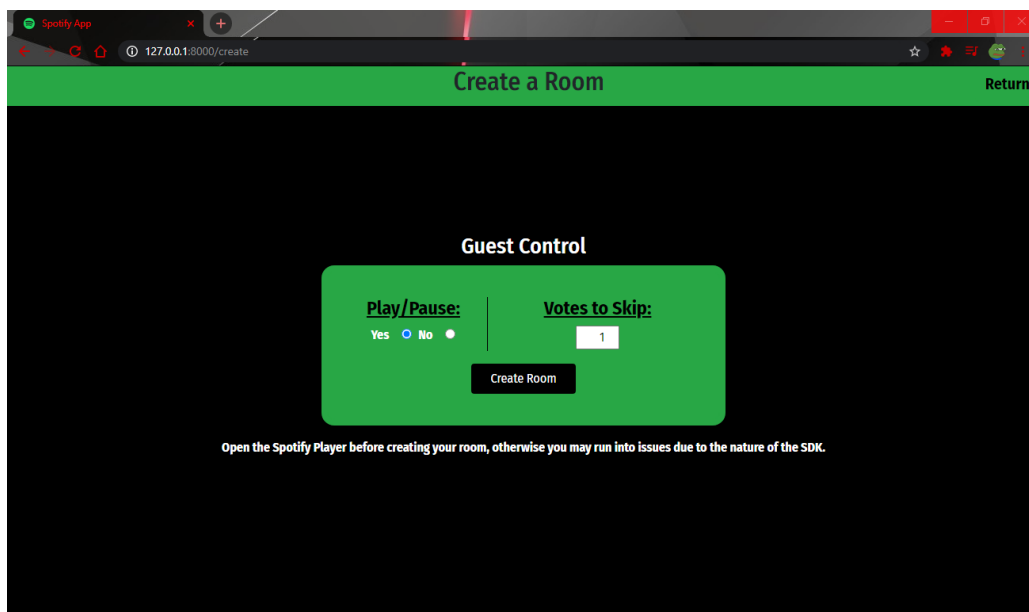

You can log in with your Facebook, Apple or Google accounts if they are linked to your Spotify. You can also use a Spotify username/password if you don't have your Spotify account connected to social media.

Once logged in, you will be redirected to the homepage. The homepage will now say 'Welcome to Spotify Groups, [your name here]'.

*Spotify Groups, now logged into Allan's Spotify account.*

Create Room

Once you are logged in with Spotify, click 'Create Room' again. You will be taken to the new room settings page.

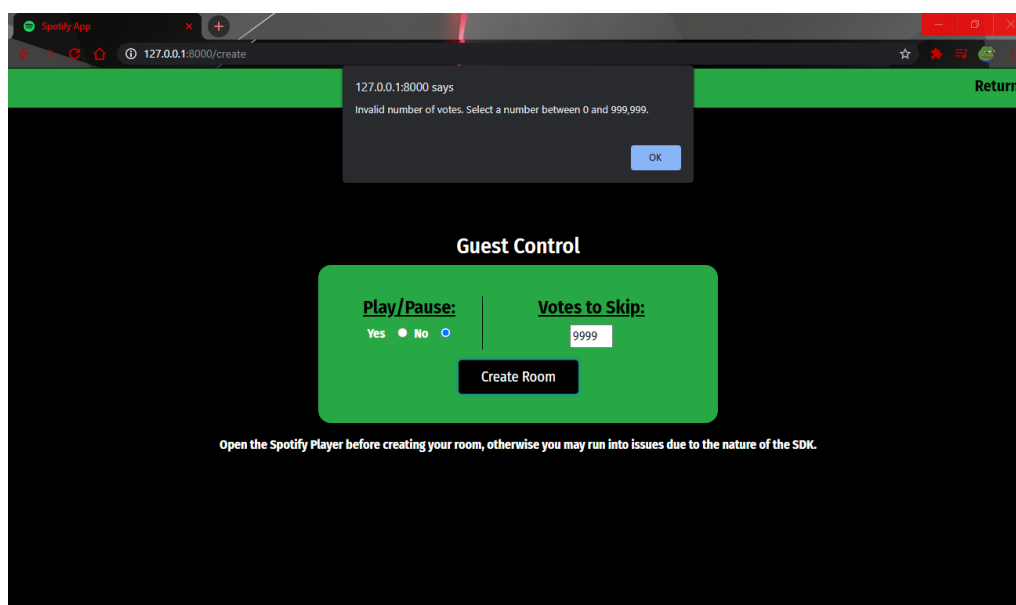

The Create Room lobby

You can set whether or not guests in the Group are allowed to pause the song currently playing, and how many votes a Group needs to skip a song. Set these and click 'Create Room' to be taken to the next page.

Alternatively, click 'Return' to be taken back to the homepage.

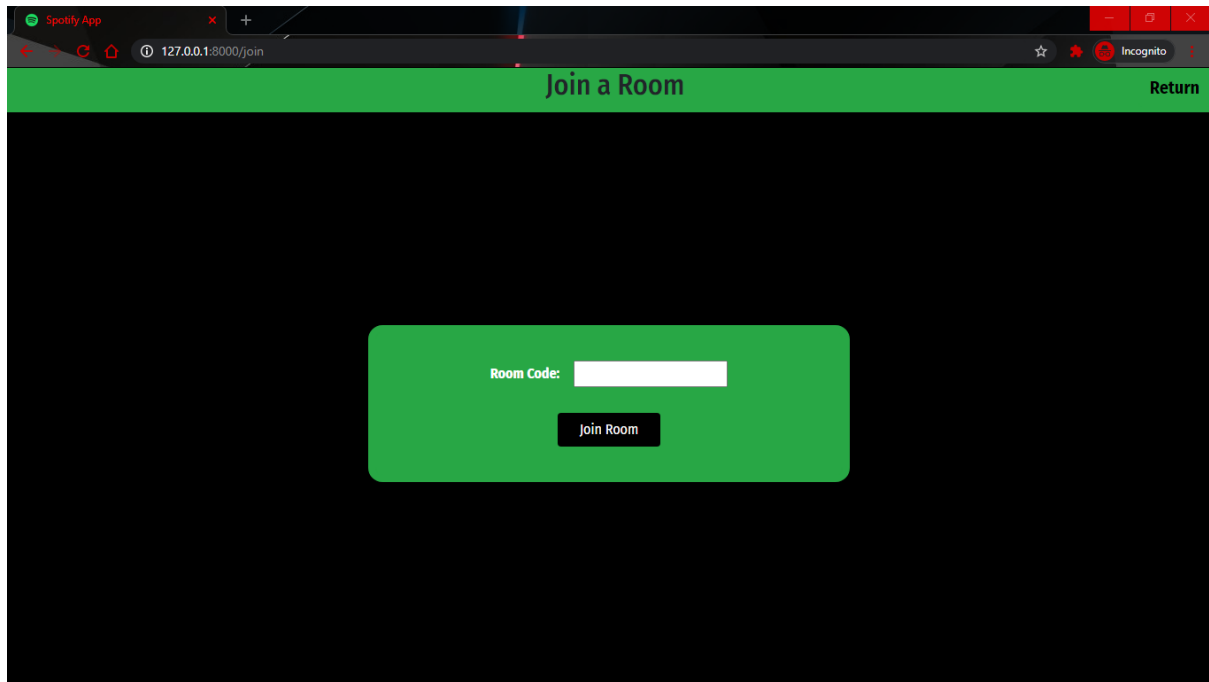

Votes must be a number between 0-999,999.

Bad vote input.

If you do not select 'Yes' or 'No' for Play/Pause, it will allow guests to play/pause by default. If you do not select the number of votes needed to skip a song, it will be set to 1.

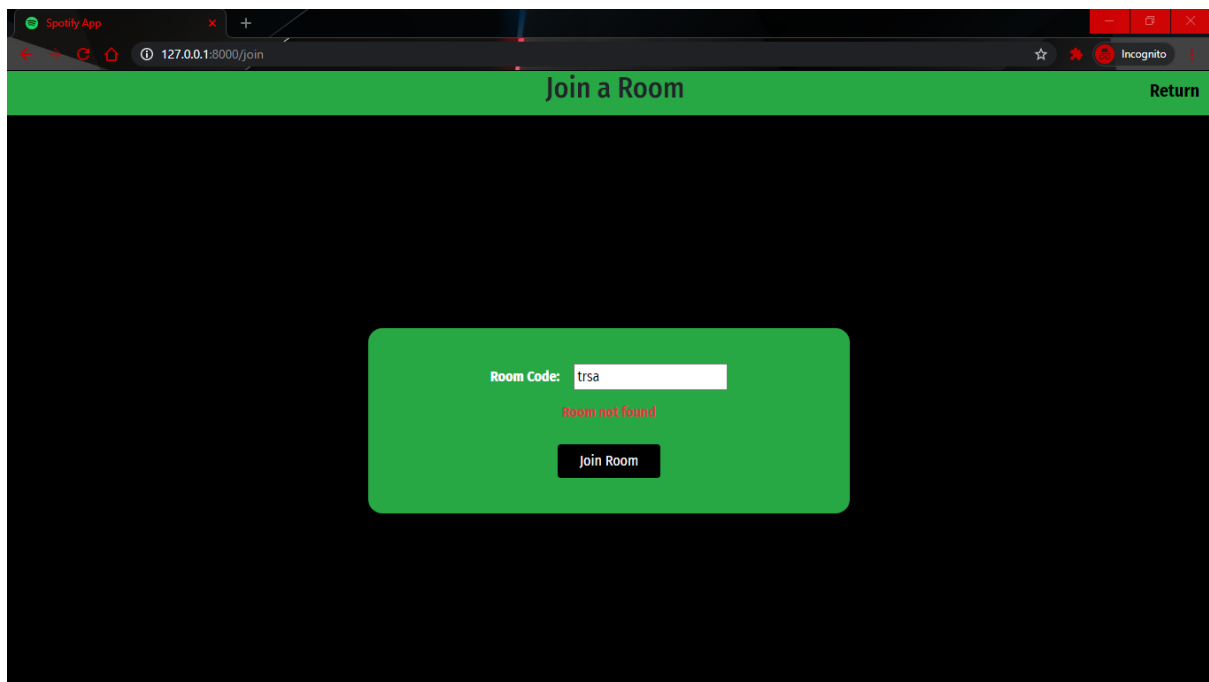

Join Room

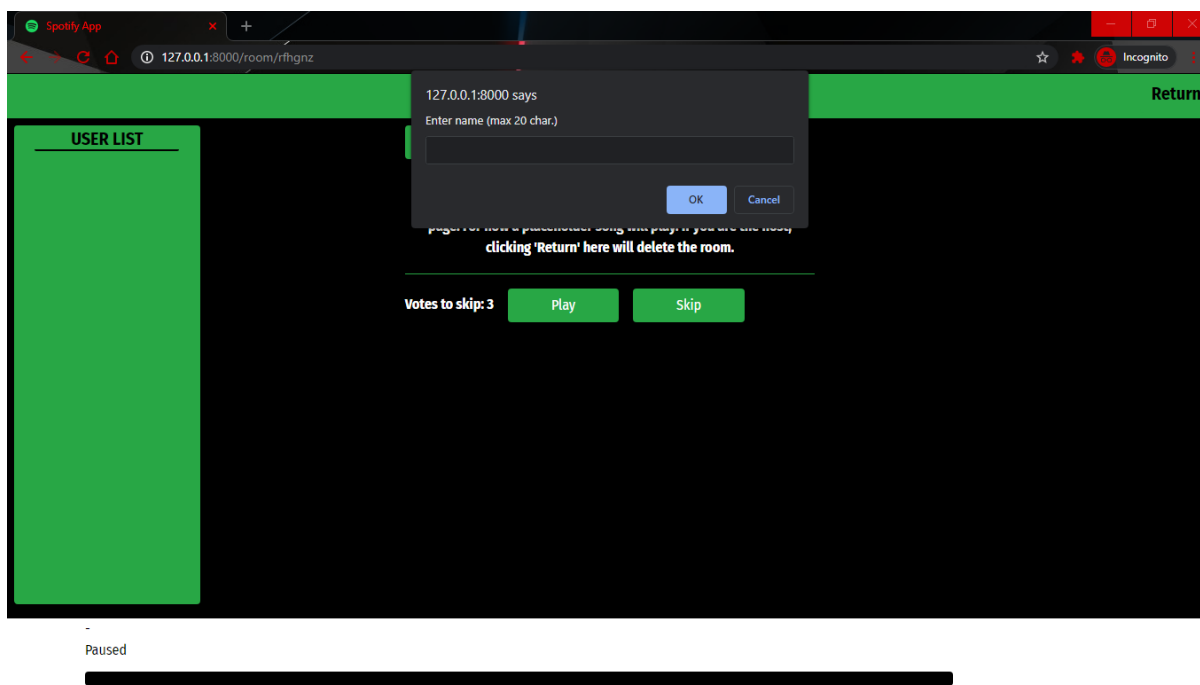

The Join Room lobby

Enter the six digit room code and click 'Join Room' to enter a room.

Less than six characters will not be accepted and will not result in any effect. Wrong codes will not be accepted.

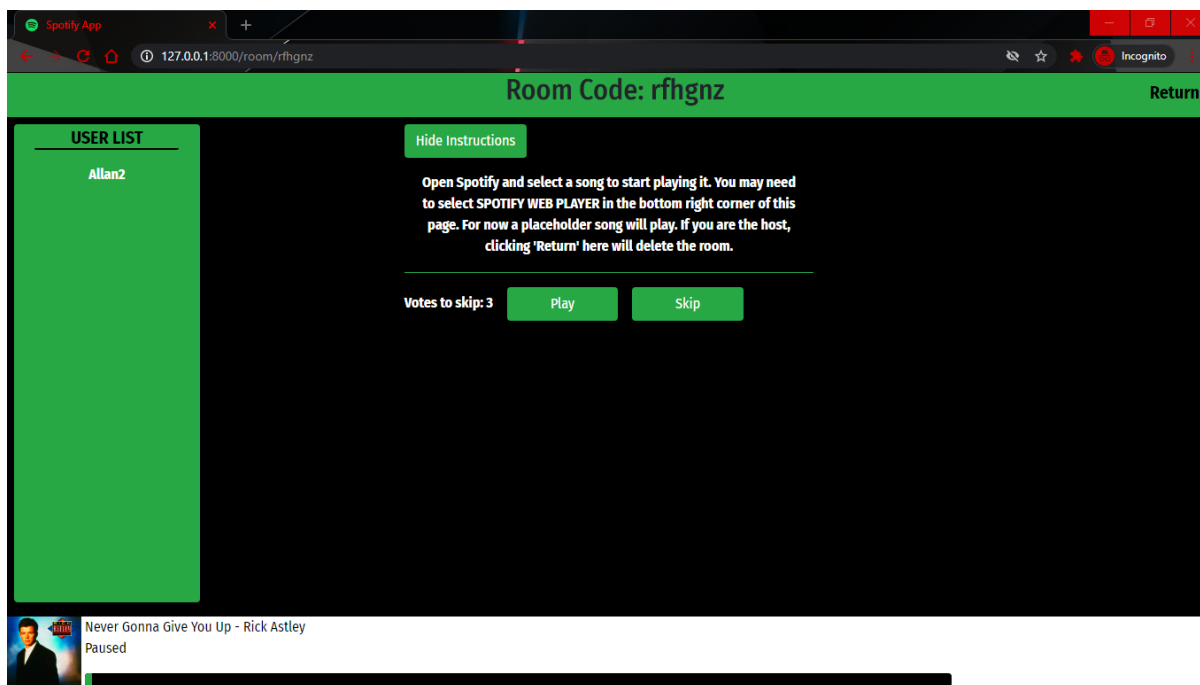

Click 'Return' to return to homepage.

Enter nickname upon joining room

Once you click 'Join Room', upon entering the room, you will be asked to enter a nickname if you have not logged in through Spotify.

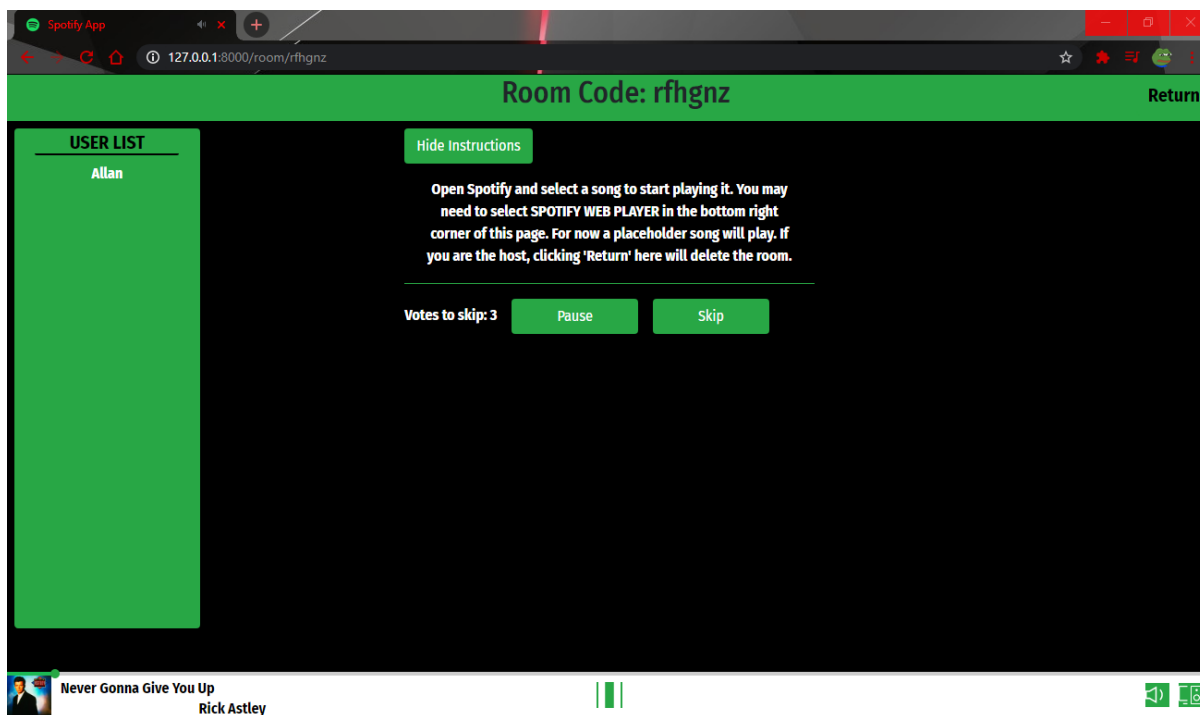

Guest has joined as 'Allan2'

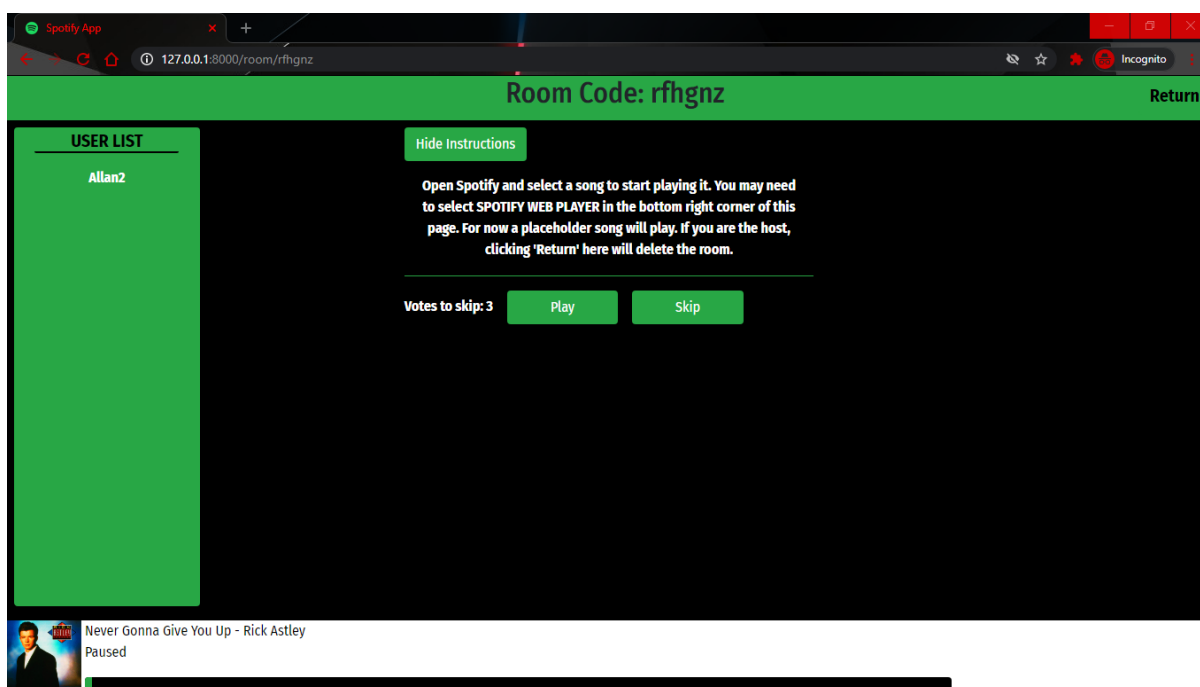

(Note: you can open incognito browsers to join a room multiple times on one computer.)

Room:

This is what the Room will look like on creation.

Host's view

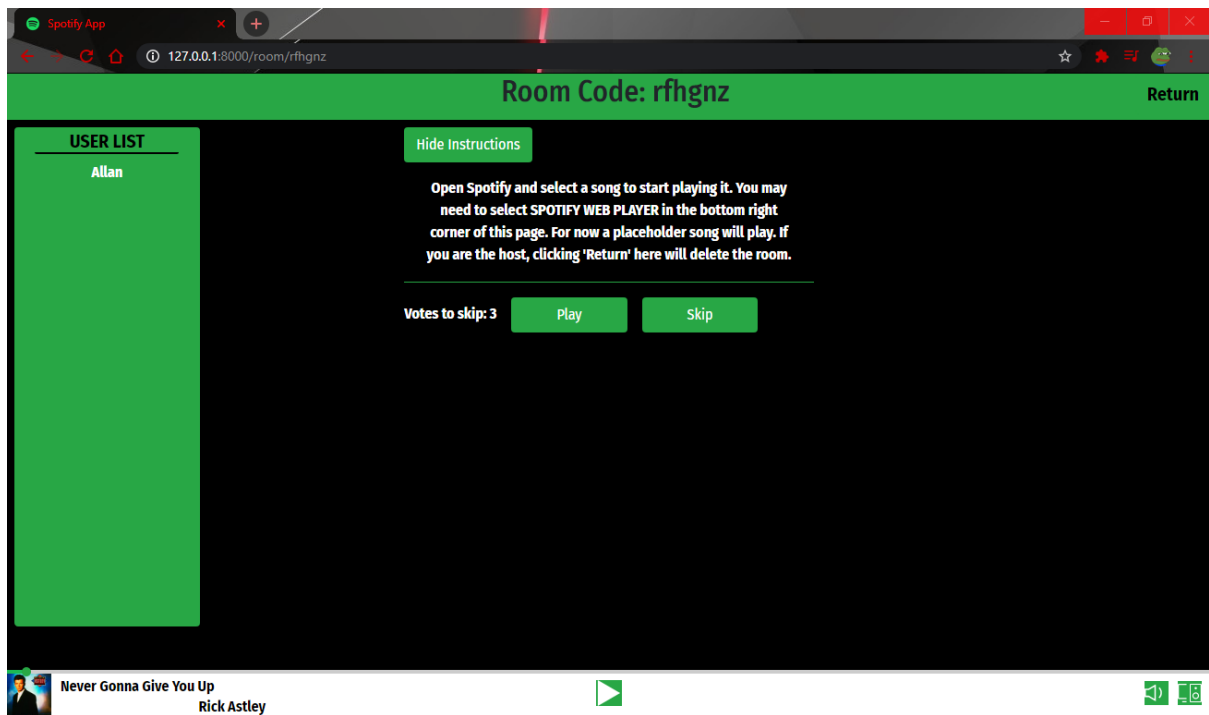

Guest's view without play/pause permissions

It will automatically play 'Never Gonna Give You Up' by Rick Astley when a user joins.

The Room Code at the top of the screen is what guests use in the 'Join Room' page, as described above.

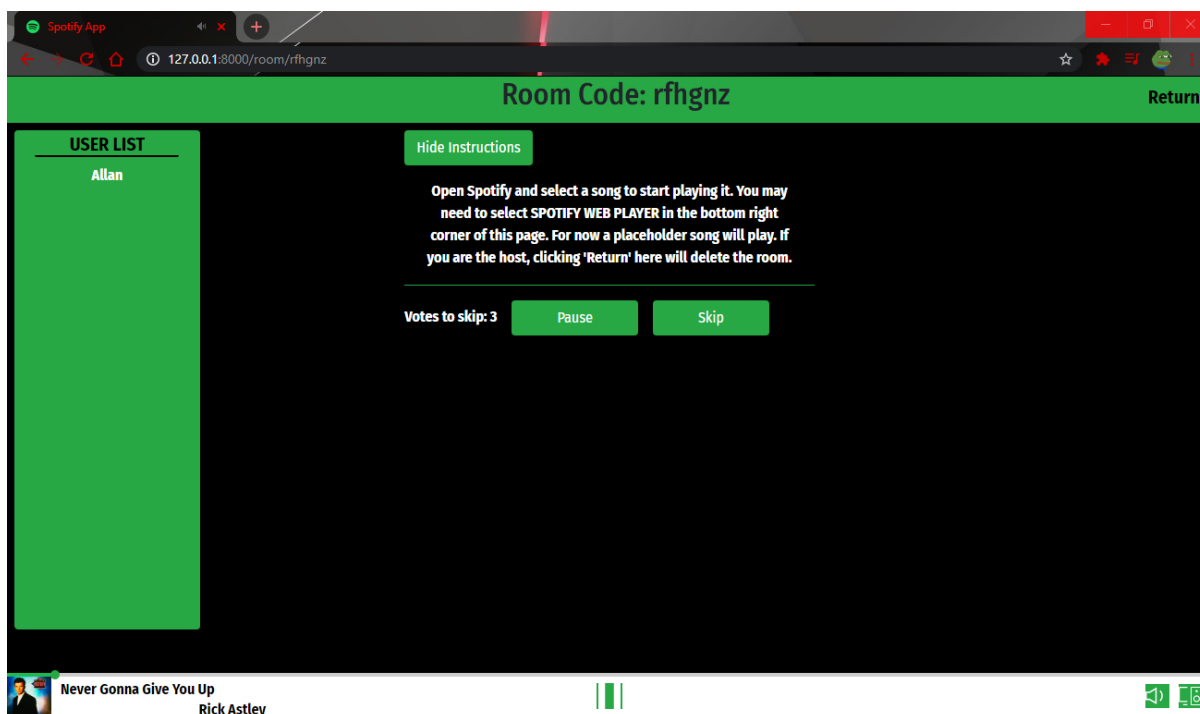

Click **'Return'** to return to the Home page. If you choose 'Create Room' again in the homepage, it will bring you back to the same room you made earlier; they are persistent.

(Note: User list has not been implemented in this release. Other users on your local network will be in the room, their usernames will just not show up on the list.)

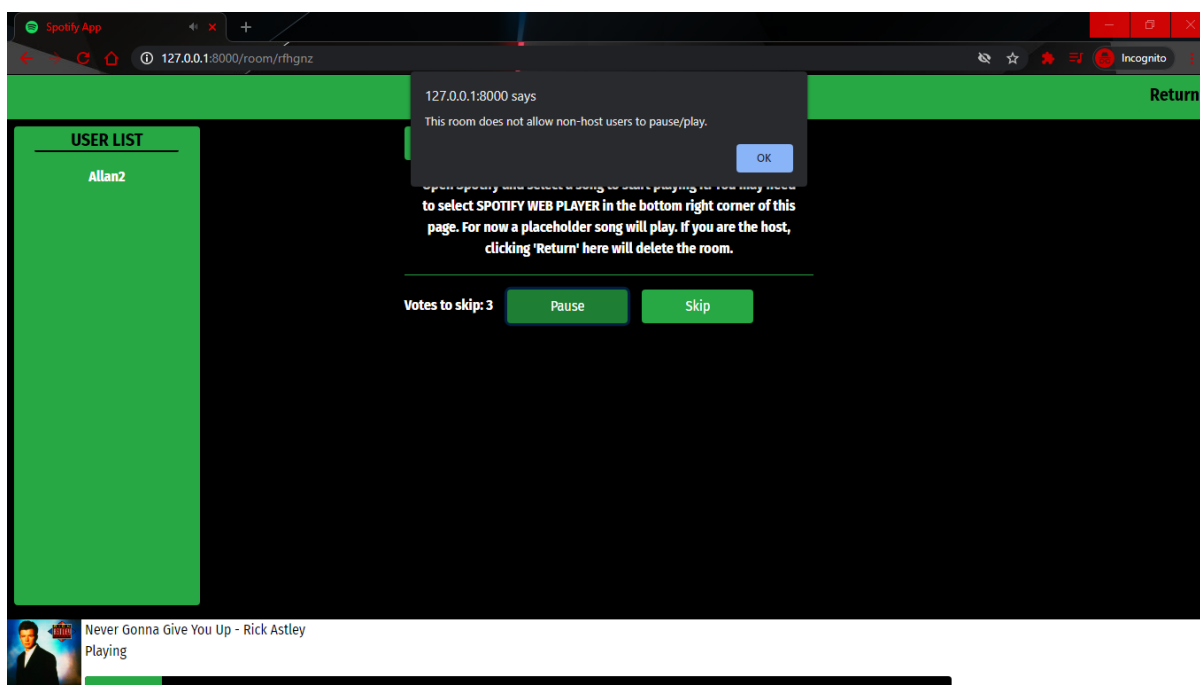

Host's view, song paused

Press 'Pause' or the pause button on the player to stop playing. Press play to start it again. Move the green circle on the player along the horizontal axis to go forward or backward in the song.

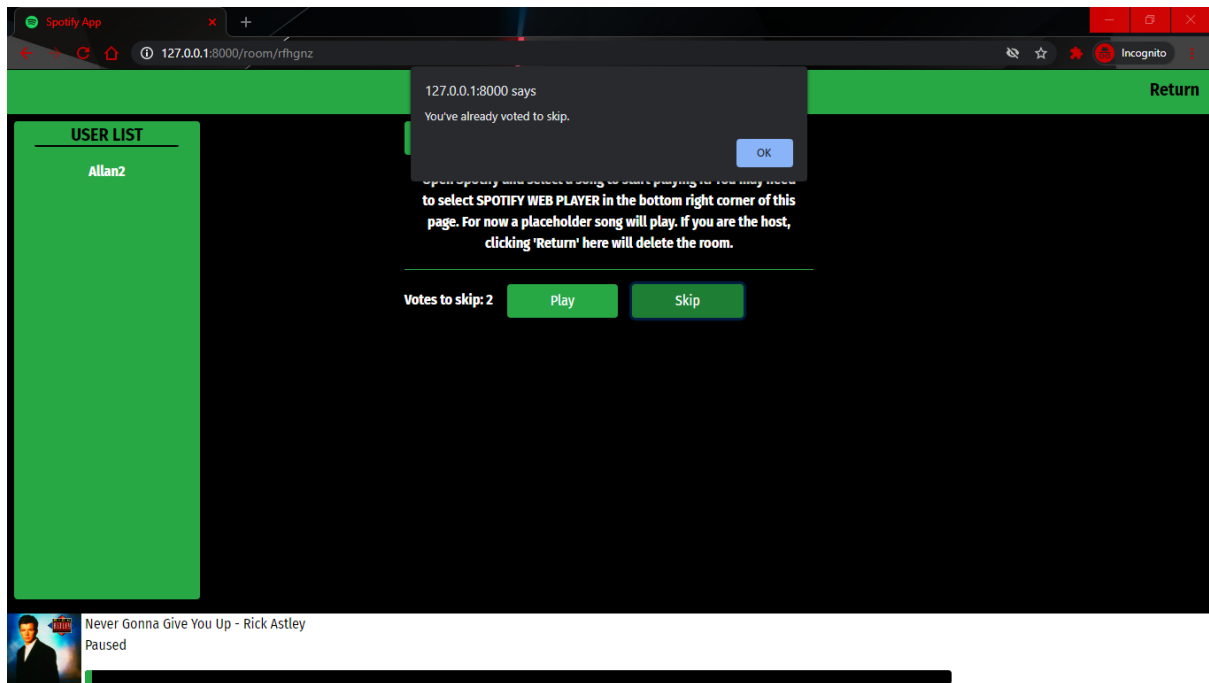

Host playing song

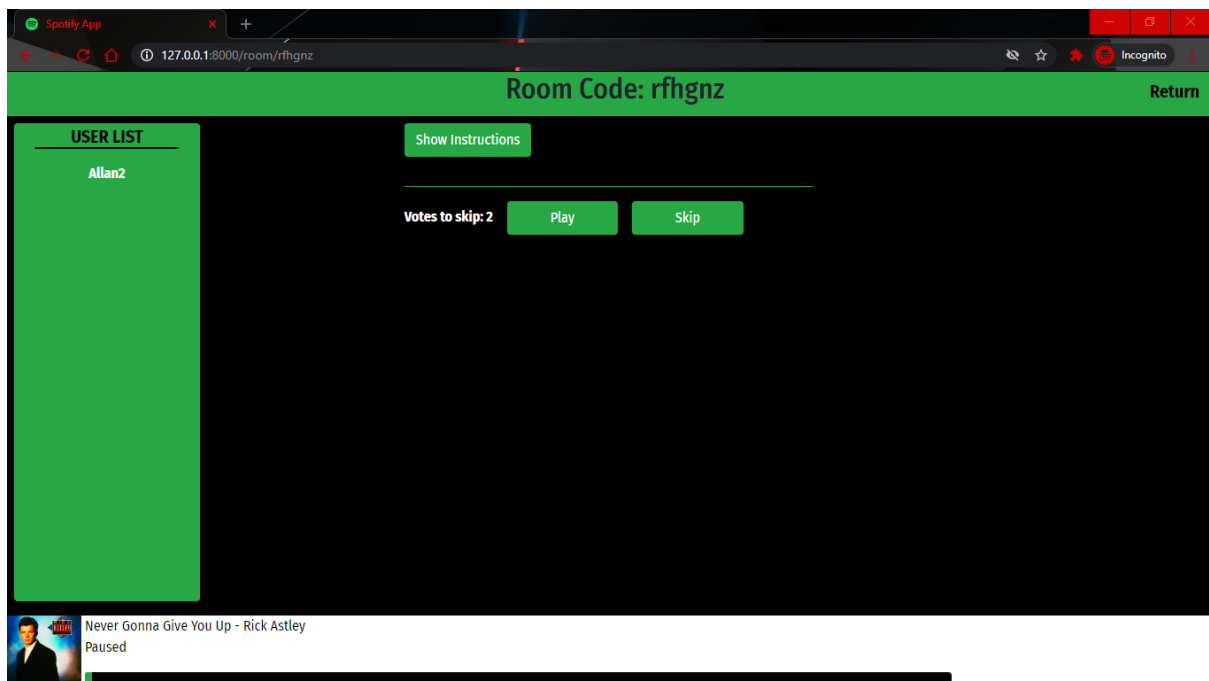

Guest view without play/pause permissions

If you attempt to click pause as a guest and it is not allowed by the host, you will get this error message.

Click the 'skip' button to register a vote to skip. If the app receives votes equalling the number set by the host on room creation, the song will skip. You cannot vote more than once.

User attempting to vote twice.

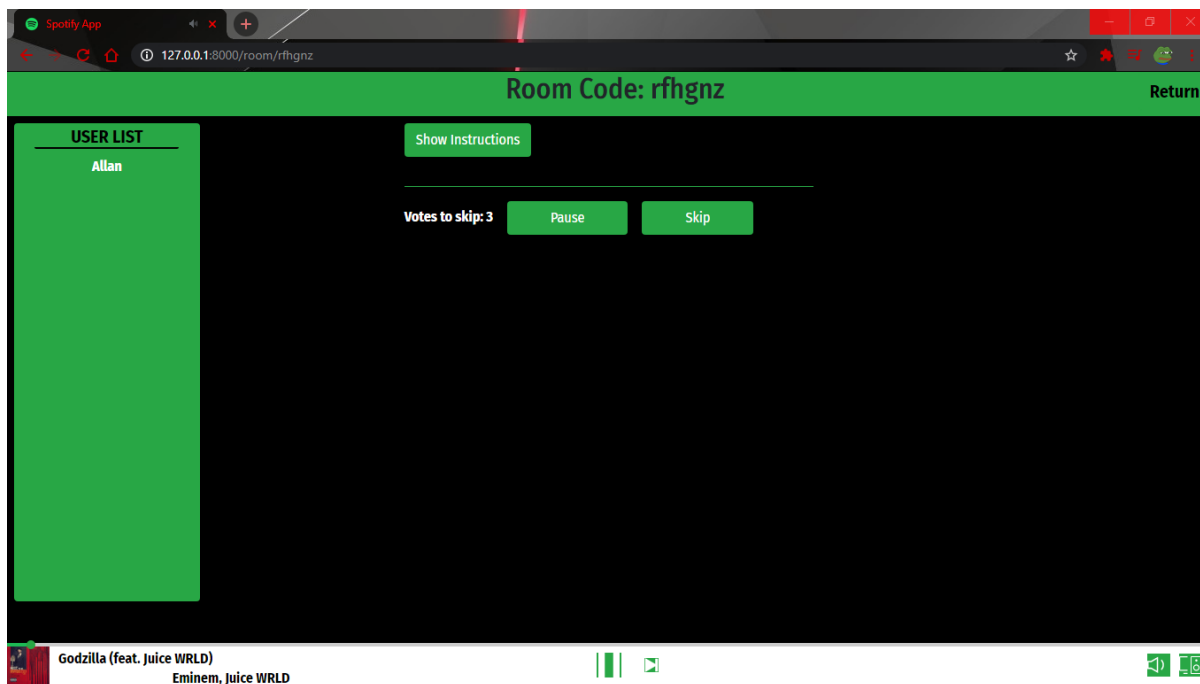

Room with instructions hidden

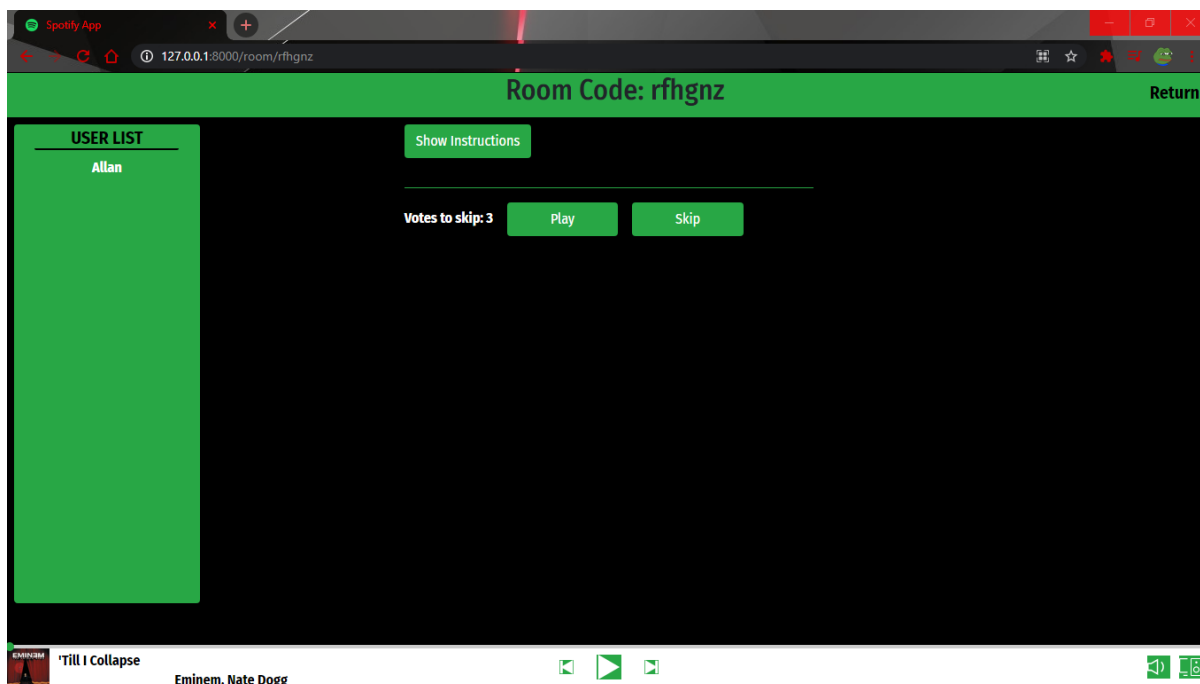

If you do not need the instructions to be shown, you can press 'hide instructions' to make them disappear.

Playing a song

Go to Spotify Web Player and play a song. Once again, this will only work if you have Premium Spotify. Return to the room and you should see this (with your choice of song in the place of Eminem's 'Godzilla').

New song being played

Song being paused

Music should now play on all devices in the Room.

You can click the 'volume' and 'speakers' icons on the right-hand-side of the player to control the playing device's volume, and if you have Spotify open on multiple devices, you can choose which one to listen through.
